Intel Docket: P11158

AMENDMENTS TO THE CLAIMS:

This listing of claims replaces all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

- Sub C1
- al cont
1. (Currently Amended) A method of generating a shadow in a virtual three-dimensional (3D) space, comprising:
adjusting a resolution of a 3D model;
projecting elements of the 3D model onto a surface in the virtual 3D space; and
rendering a shadow having the adjusted resolution of the 3D model on the surface using the projected elements; and
rendering the 3D model at a resolution that is higher than the adjusted resolution.
 2. (Original) The method of claim 1, wherein the elements of the 3D model are projected based on a location of a virtual light source in the virtual 3D space.
 3. (Original) The method of claim 2, wherein the virtual 3D space includes a second virtual light source; and
the method further comprises:
adjusting the resolution of the 3D model to a second resolution;

Attorney's Docket No.: 10559-479001
Intel Docket: P11158

projecting elements of the 3D model onto a second surface in the virtual 3D space
based on a location of the second virtual light source; and

rendering a second shadow having the second resolution on the second surface
using the elements projected on the second surface.

4. (Original) The method of claim 1, wherein adjusting comprises reducing the
resolution of the 3D model.

5. (Original) The method of claim 4, wherein adjusting comprises removing elements of
the 3D model.

6. (Original) The method of claim 5, wherein the 3D model comprises a multi-resolution
model.

7. (Original) The method of claim 1, further comprising:
providing a user interface for use in adjusting the resolution of the 3D model.

8 (Cancelled)

9. (Original) The method of claim 1, wherein the elements comprise vertices of the 3D
model.

Intel Docket: P11158

10. (Original) The method of claim 1 wherein the elements comprise polygons of the 3D model.

11. (Currently Amended) An apparatus for generating a shadow in a virtual three-dimensional (3D) space, comprising:

a memory that stores executable instructions; and

a processor that executes the instructions to:

adjust a resolution of a 3D model;

project elements of the 3D model onto a surface in the virtual 3D space; and

render a shadow having the adjusted resolution of the 3D model on the surface

using the projected elements; and

render the 3D model at a resolution that is higher than the adjusted resolution.

12. (Original) The apparatus of claim 11, wherein the elements of the 3D model are projected based on a location of a virtual light source in the virtual 3D space.

13. (Original) The apparatus of claim 12, wherein the virtual 3D space includes a second virtual light source and the processor executes instructions to:

adjust the resolution of the 3D model to a second resolution;

Attorney's Docket No.: 10559-479001
Intel Docket: P11158

project elements of the 3D model onto a second surface in the virtual 3D space based on a location of the second virtual light source; and

render a second shadow having the second resolution on the second surface using the elements projected on the second surface.

14. (Original) The apparatus of claim 11, wherein adjusting comprises reducing the resolution of the 3D model.

cnt
15. (Original) The apparatus of claim 14, wherein adjusting comprises removing elements of the 3D model.

16. (Original) The apparatus of claim 15, wherein the 3D model comprises a multi-resolution model.

17. (Original) The apparatus of claim 11, wherein the processor executes instructions to provide a user interface for use in adjusting the resolution of the 3D model.

18 (Cancelled)

19. (Original) The apparatus of claim 11, wherein the elements comprise vertices of the 3D model.

Intel Docket: P11158

20. (Original) The apparatus of claim 11, wherein the elements comprise polygons of the 3D model.

21. (Currently Amended) An article comprising a machine-readable medium that stores executable instructions for selecting a target object in virtual three-dimensional (3D) space, the instructions causing a machine to:

adjust a resolution of a 3D model;

project elements of the 3D model onto a surface in the virtual 3D space; and

render a shadow having the adjusted resolution of the 3D model on the surface using the projected elements; and

render the 3D model at a resolution that is higher than the adjusted resolution.

22. (Original) The article of claim 21, wherein the elements of the 3D model are projected based on a location of a virtual light source in the virtual 3D space.

23. (Original) The article of claim 22, wherein the virtual 3D space includes a second virtual light source and the article further comprises instructions that cause the machine to:

adjust the resolution of the 3D model to a second resolution;

project elements of the 3D model onto a second surface in the virtual 3D space based on a location of the second virtual light source; and

Attorney's Docket No.: 10559-479001
Intel Docket: P11158

render a second shadow having the second resolution on the second surface using the elements projected on the second surface.

24. (Original) The article of claim 21, wherein adjusting comprises reducing the resolution of the 3D model.

25. (Original) The article of claim 24, wherein adjusting comprises removing elements of the 3D model.

26. (Original) The article of claim 25, wherein the 3D model comprises a multi-resolution model.

27. (Original) The article of claim 21, further comprising instructions that cause the machine to provide a user interface for use in adjusting the resolution of the 3D model.

28. (Cancelled)

29. (Original) The article of claim 21, wherein the elements comprise vertices of the 3D model.
